ARVEEND PHRASEART MA NOON

Taiping, Perak | 011-26806414 | apveend@gmail.com | aparve08.github.io/portfolioV1

SUMMARY

Software engineer with hands-on experience building and maintaining enterprise web applications, manufacturing systems (MES), automation tools and RESTful APIs. Experienced in VB.NET, C#, PHP, ASP.NET, React and Java, with a growing focus on AI solutions (LLMs, vision-language models, RAG, OCR) and the Microsoft Power Platform. Strong foundation in backend development, system integration and process automation within manufacturing environments.

WORK EXPERIENCE

IT Executive (Software), Toyo Tires March 2026 – Present

- Performed daily system monitoring and troubleshooting for MES and internal systems.
- Developed and maintained MES features using VB.NET and C#.
- Built and automated internal workflows using C#, Power Apps, Power Automate and AI Builder, improving process efficiency.
- Person in charge of Microsoft Power Platform (Power Apps, Power Automate and related services): development, deployment, governance and user support.
- Build AI solutions with LLMs, vision-language models and open-source models, including RAG, OCR and API integrations.

IT Technician, YBS International Berhad July 2025 – March 2026

- Developed and maintained internal web applications including E-Appraisal, IT Request System Management and IT Asset Management using PHP, MySQL, REST APIs, Docker and Git.
- Designed database schemas and implemented CRUD workflows to support internal operations.
- Managed the MES system for the production line (PCB) and assisted in setting up the system and infrastructure.
- Provided IT and application support across 3 manufacturing plants, minimizing downtime and improving response efficiency.
- Administered Windows Server, Active Directory and Microsoft 365, including backups, patching and access control.

Application Developer Intern, Spritzer Berhad Aug 2024 – Jan 2025

- Developed automation tools using React, TypeScript and ASP.NET, reducing manual workload.
- Integrated ManageEngine API with C# and automated workflows using Power Automate.
- Built reporting dashboards using Power BI and Excel.
- Improved system efficiency by using machine learning and C# to predict and auto-complete missing or incorrect ticket fields, minimizing data inconsistencies.

Freelance, Self-Employed (FlutterFlow) Jan 2023 – Jun 2024

- Developed a cross-platform application using FlutterFlow, integrating Firebase for backend functionality, including real-time database, authentication and cloud functions.

SELECTED PROJECTS

Factory Guardian – Autonomous Incident Investigation Agent Agentic Cinema Hackathon

- Built an AI agent that investigates alerts on a simulated factory line: it queries metrics, logs and traces in Grafana, reports a root cause with cited evidence, and verifies recovery after human approval.
- Added an approval gate on the remediation tool and a verified before/after recovery report (API latency 6,834 ms $\rightarrow$ 199 ms; error rate 14.8% $\rightarrow$ 0.2%).

Stack: Google ADK, Gemini, MCP, Grafana Cloud, OpenTelemetry, Python, FastAPI

Glasshouse – Tamper-Evident Session Recorder for AI Coding Agents Hackathon

- Built a recorder and offline replay viewer that logs observable agent actions (file edits, commands, test runs) in a SHA-256 hash chain, with an interactive timeline, diff inspection and integrity verification.
- Adapter-based design with working Codex CLI and Claude Code adapters; sessions export as self-contained HTML replay files.

Stack: TypeScript, Node.js, SHA-256 hash chain

RunTrack – Running Analytics App Personal Project

- Built an app combining Strava run analysis, meal photo analysis and a health metrics dashboard, deployed on Google Cloud Run.

Stack: FastAPI, Gemini Flash, Supabase, Next.js

NanoLake – In-Browser SQL Workbench Personal Project

- Built a single-file SQL workbench running DuckDB-Wasm in the browser, with drag-and-drop CSV/JSON/Parquet ingestion, SVG charts and Parquet export.

Stack: DuckDB-Wasm, JavaScript, SQL

AI FusionGateway – Multi-Model Consensus Gateway Personal Project

- Built a fully local gateway that fans one prompt out to 3 open-source LLMs via Ollama, embeds the responses and scores pairwise agreement, then picks a consensus centroid or fuses a final answer with a judge model.
- Next.js dashboard streams live per-model latency, consensus percentage and a consensus math log over WebSockets.

Stack: Ollama, Next.js, React, WebSockets, embeddings

FlexSQL Workbench – SQL Mock Data Generator Personal Project

- Built a client-side tool that generates relational SQL mock data, using a DAG-based topological sort to respect foreign-key dependencies between tables.

Stack: JavaScript, SQL

EDUCATION

Bachelor of Computer Science (Software Engineering) with Honours 2021 – 2025
University of Malaysia Terengganu • CGPA: 3.40

Foundation in STeM 2020 – 2021
University of Malaysia Terengganu • CGPA: 3.96

SPM 2015 – 2019
SMK Taman Tasik, Taiping • 8A 1B

ADDITIONAL INFORMATION

Languages & Frameworks: PHP, C#, VB.NET, Java, Python, ASP.NET, Spring Boot, React, CodeIgniter, Flask

Web & APIs: RESTful APIs, Postman, HTML, CSS, JavaScript

Databases: MySQL, PostgreSQL, SQL, Firebase, SSMS

DevOps & Tools: Docker, Git, GitHub, Power Apps, Power Automate, Power BI, Google Colab, scikit-learn, ML.NET, Google AI Studio, Gemini API, Microsoft AI Builder

Systems & Platforms: Windows Server, Active Directory, Microsoft 365

Spoken Languages: English, Malay, Thai

Certifications: Artificial Intelligence Fundamentals (IBM SkillsBuild), Data Fundamentals (IBM SkillsBuild)

Awards & Activities:

- Top 10 Best Debater, “Debat Uniti Keluarga Malaysia, Piala YB Menteri Perpaduan 2022”.
- Champion and Best Debater, UMT Vice Chancellor Cup Debate Competition 2022.
- Google Developer Fest, Georgetown (LangChain, Vertex AI, SQL and GenAI with Firebase Data, Fundamentals of Flutter).
- Endurance running, trail races, futsal.
